Smart Location Calculator: User Training Guide

03.30.2021

The User Guide for the SLC v2.0 is currently under development and will be available shortly. For additional information please email slc@gsa.gov.

The Smart Location Calculator provides a way to estimate average employee commute vehicle miles traveled (VMT) and associated transportation impacts by workplace location. It provides an easy way to compare the relative location efficiency of work sites across a given metro region and inform the process of facility site selection.
